Physical education at schools

A new way of teaching physical education.

Give them action and they will enjoy exercise.

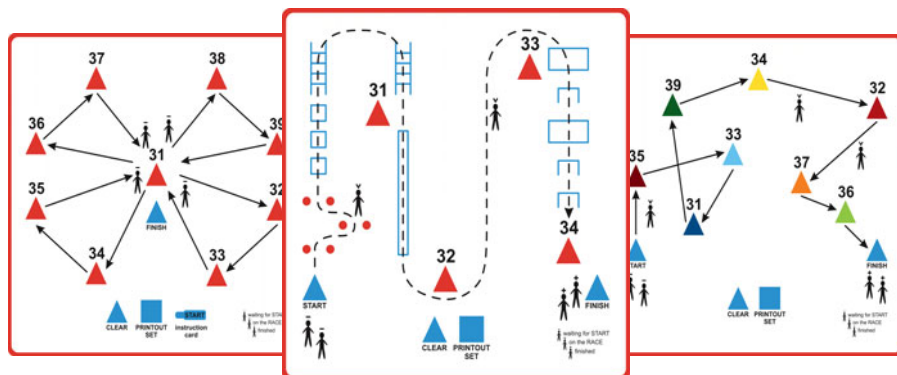

New ideas are required to make the physical education more varied and vital. SPORTident helps the teacher to inspire the students again and again to improve their accomplished achievements.

Create an exciting obstacle course, turn on your SPORTident timing devices and let your pupils measure their running time. It's so easy to make physical education more attractive and to motivate the whole class. At the same time your effort for preparation and evaluation of teaching is reduced.

With the SPORTident School- and Training-Set a wide range of exercises is possible - from warm-up exercises to complete sport lessons, indoor and outdoor. It can be used individually or by teams, at every age, at one or more locations. Use our suggested exercises or create your own courses and implement the SPORTident School- and Training-Set. You will see how easy it is - with small preparation time!

The set itself is a fully featured configuration of SI-Cards, SI-Stations and a thermal printer. It enables the immediate use of the SPORTident system without a PC. The whole configuration is battery-driven. The equipment is very robust and will also cope with rough treatment. It is waterproofed (except the printer), which makes it suitable not only in the gym but also in the playground.

SPORTident is simple, reliable and makes fun guaranteed.

When the SI-Card is inserted into the hole of a SPORTident control station the time and the identification number are stored in the SI-card. The process of identification is indicated visually and acoustically.

Since all data records are stored in the SI-Card a quick evaluation is no problem. Immediately the pupils receive their printout sheet with the results after each exercise. Now they are able to compare their results and can see their improvements.
