

SPORTident ComCard Up

May 2015

SPORTident ComCard combines a SPORTident card and a mechanical compass in one housing.

The device offers a very comfortable punching experience that you have come to rely on by using SPORTident. Navigation by compass is integrated and its patent-pending design guarantees zero deviation of the compass needle by the card.

Building on the proven SI-Card8, the device stores up to 30 punches while taking just over a tenth of a second per punch.

The ComCard Up is equipped with a good, all-around Moscompass capsule with fast setting time and good stability. The capsule features a large needle and a full scale making it ideal for the beginning and advanced orienteer.

The first generation of the SPORTident ComCard

- ▲ The ComCard Up is made for all generations of enthusiastic, beginning and advanced orienteers.
- ▲ ComCard Up combines the SI-Card8 and a thumb compass in one single device.
- ▲ The patent-pending design guarantees zero deviation of the compass needle and offering a comfortable punching experience at the same time.
- ▲ The electronic module is placed underneath runner's thumb for optimal, distraction-free orienteering.
- ▲ Left-handed and right-handed versions of the ComCard Up are available.
